

4-H Green Slime!

Are you in the mood for SLIME? Follow these instructions on how to craft your own 4-G Clover green slime!

Ingredients:

- Glue - green glitter glue or white school glue
- Food coloring (if using white glue)
- Water - 1 cup + 1 tsp.
- Borax soap - 1 tsp.
- 1 Ziplock bag

Step 1: In a large bowl, mix together the bottle of glue + 1 tsp. of water.

Step 2: Dissolve 1 tsp. of Borax into 1 cup of water.

Step 3: Stir the Borax mixture into the glue mixture. The glue mixture will immediately begin to get thick and clumpy. Continue to stir for about 20-30 seconds.

Step 4: As soon as the glue mixture has thickened and formed one large mass, drain off the excess liquid.

Step 4: Knead the slime - it'll be goopy and sticky at first, but it will firm up as you work with it.

When the slime is ready, it will be soft, smooth, silky, and will have a slow, fluid consistency that will take the shape of whatever vessel you put it into. It's a ton of sensory fun, and once you start squishing, you'll never want to stop!

Store Slime in a Ziplock bag for repeated use!
